

SUCCESS — what it did well

- Picked the right things for the user
- Used the user's specific tastes
- Wrote in the user's own style
- Personalized without oversharing
- Knew when to speak up or stay quiet
- Stuck to the facts (or admitted it wasn't sure)
- Used the user's up-to-date preferences

FAILURE — the underlying reason it got it wrong

- Missed info that was buried in the context
- Relevant info wasn't stored or retrieved
- Its search never surfaced the info
- Found the info but ranked the wrong things on top
- Gave a generic answer, ignoring what it knew
- Made up details that weren't there
- Overdid it — shared private info it shouldn't
- Spoke up when it should've held back (or vice-versa)
- Used old info the user had moved on from
- Didn't do what was actually asked
- Gave an empty answer, refused, or errored
