ABLATION — MEMORY & OVER-PERSONALIZATION (the higher the better)

ABLATION	GPT-5.5	Gemini-3.5-Flash	MOTIVATION
Long Context	**75.3**	**59.5**	
Long Context w/o sensitive events	+5.6	+2.0	Maybe sensitive events in long context could trigger more over-personalization. ✓
Textual Memory	**71.0▼**	**69.3▲**	
Textual Memory, written by the other model	−4.7	+1.5	Maybe Gemini's memory keeps fewer things that could trigger over-personalization. ✓
Textual Memory w/ 3 sensitive events	−1.3	−3.0	Maybe raw sensitive events not in memory could trigger Gemini's over-personalization.
Textual Memory w/ 40 sensitive events	−2.5	−5.5	Maybe more raw sensitive events not in memory could trigger Gemini's over-personalization. ✓
Textual Memory w/ 40 ordinary events	−0.5	+0.3	Maybe more raw ordinary events in context triggers Gemini's over-personalization.
Textual Memory w/ frequency counts	−0.6	−0.9	Maybe frequency counts could trigger Gemini's over-personalization.
