Find a place by its name

Task Objective: Show me {location} on the map
Action Trajectory:
To find the {location}, I will search for "{location}" on OpenStreetMap.

```
fill('145', {location})
click('147')
```

Adopt the first few steps from earlier, easier workflows

Get the zip code of a place

Task Objective: Tell me the zip of code of {location}
Action Trajectory:

To find the zip code of {location}, I will first search for {location} on OpenStreetMap. Once located, I will extract the zip code from the map or the associated information

```
fill('145', {location})
click('147')
```

Add more steps to build increasingly complex workflows

The search results have provided multiple locations…. This location includes the zip code.

```
send_msg_to_user("The zip code is {zip-code}")
```
